STEEL DRUM

Large Steel Drum

Worldwide Standard

The large steel drum is a recognized global container with the same specifications around the world. Hazardous and non-hazardous products are packaged and transported in steel drums due to the high mechanical and chemical performance with UN certification.

Strength, Compatibility and Customization

Tight Head or Open Head Steel Drums Available

OVERVIEW

- ✔ Tight Head drums have a triple seam construction (7 layers of steel) with a vertical seam electrically welded.
- ✔ Superior vacuum resistance.
- ✔ Open Head drums have completely removable lids and a triple seam safety factor with several locking band alternatives.

- ✔ Many large steel drums can be reconditioned and reused several times before being recycled.
- ✔ Fully customizable—size 55+ gallons (208+ liters), lined, various closures and fittings available from Tri-Sure®. Various color and product decoration options are also available.

Closures and fittings configurations include multiple position tops/covers and side walls.*

Full index of RDL lacquers is available to meet customer supplied requirements. Additionally, tight head/open top composite and open top plastic liner options are offered.

Our standard color offerings include 30+ colors from the RAL matrix. Customer-specific colors can be accommodated on premium drums.

Various decorations are possible including simple screen printing to complex full body digital printing.*

*Options vary by region.

For more information, talk to your local sales representative.
